LET YOU SLEEP AND RELAX LET YOU SLEEP HEALTHIER AND MORE COMFORTABLE

INDIVIDUAL POCKET SPRING MATTRESS

The independent pocket spring mattress has individual movements, independent support, and can be separately extended and retracted. Therefore, one of the two people lying on the top turns over or leaves, and the other person does not suffer from the slightest influence, ensuring a comfortable and comfortable sleep.

Each spring is twisted into a "barrel shape" with a special strong steel wire; then it is sealed in a tough fiber generation through a compression process, effectively preventing mold or insects, and avoiding the internal friction of the spring to shake and emit noise; According to the ergonomic principle, the three-stage independent spring can flexibly flex according to the curve and weight of the human body, and support each part of the body evenly, keeping the spine naturally straight, so that the muscles are fully relaxed and the number of sleep turns is reduced. .

EASY TO SOLVE
**THREE MAJOR
PROBLEMS**
the best support for your balance

SUPPORT SYSTEM

SUPPORT SYSTEM, LOW BACK PAIN

spring encryption technology, production to avoid mattress collapse

The special encrypted spring bed net can provide stronger support for the shoulder, back and buttocks of the human body during sleep, preventing the mattress from collapsing;

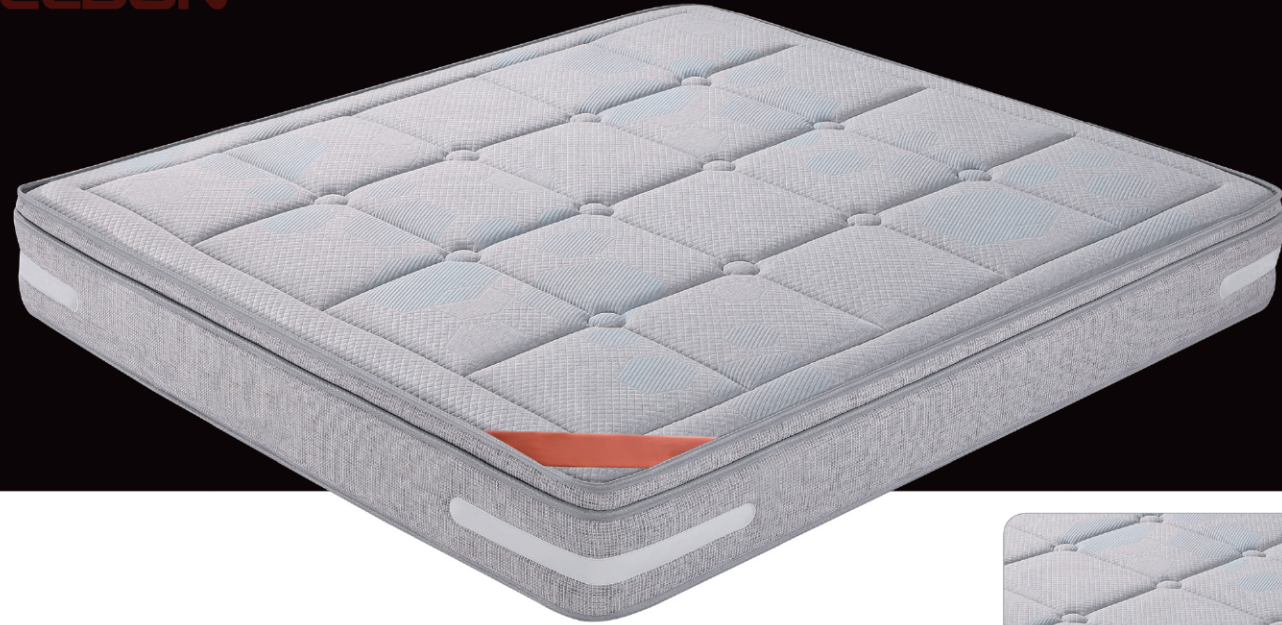

the spring arrangement parallel to the human body eliminates the sleep companion naive influence

The unique head-to-foot patented design allows the spring alignment and spring technology to be consistent with the human spine and sleep direction, effectively providing appropriate support for sleepers of different weights, avoiding the interaction between sleeping companions during sleep. .

spring extension technology to prevent the frame from being sunken

The spring extends to the bed net frame, which adds more wire support surface than other bed nets. The frame reinforcement of the double-layer steel wire provides stronger support and avoids the frame recess.
