The stainless steel sinks from our factory are manufactured with the greatest care using the highest quality stainless steel. You can look forward to many years of trouble-free service.

Stainless steel AISI304 has strong anti-rust characteristic, but does not mean NONRUST under some specific environment. Here are some tips which may help care for and maintain the sinks

Maintenance Tips

- Frequent and regular cleaning is highly recommended
- Keep your sink free of any standing water and do not allow any mineral deposits
- Do not leave cleaning pads in the sink overnight, it may make the surface fade and cause rust
- Do not use your sink as a cutting surface, it will be scratched and bent
- Do not leave any rusty articles in/ on the sink
- Do not use abrasive pads or cleaners on cleaning the sink
- Do not use cleaning agents containing chlorine (generally sodium hypochlorite) or hydrochloric acid
- Gas/ Vapour from open bottles of bleach or chemical cleaners in the cabinets could attack the underside of the sink
- Avoid direct or prolonged contact with rusting iron objects (cast-iron pans or iron filings)

Installation Guide

For Topmount Sink
